

Perar

Trunnion Mounted Ball Valves

Perar
**THAT'S
QUALITY**

The Best Guarantee of Safety

Perar Ball Valves, One of the first.... since 1962

Founded in 1962, Perar is one of the first Italian Manufacturers of High Quality Ball Valves. The development of the company started as leading supplier in Gas Industry, all over the domestic market.

In the following years, Perar, has experienced a continuous and steady growth in the areas of world-wide sales, production capacity, efficiency and technological development.

Perar today is one of the leading Italian manufacturers of High Quality Industrial Valves for a wide variety of applications in various fields like Oil, Gas, Petrochemical, On-Off Shore, Heavy Chemicals, and over...

Perar production includes Ball Valves in sizes from 1/2" to 60". Ansi classes 150 to 2500 and Api 2000 to Api 20000, in Carbon Steel, Stainless Steel, Duplex Steel, Super Duplex Steel, Alloy Steel, Incoloy, Monel, 6Mo, Titanium, and various others...

The construction available are:

- Floating Design
- Trunnion Mounted Side Entry
- Trunnion Mounted Top Entry
- Metal Seated
- Sub-sea and Cryogenic
- Bolted and Fully-Welded Body.

Perar Product Range

Trunnion Mounted Side-Entry Ball Valves

Side-Entry Ball Valves represent the basic design standard of PERAR trunnion mounted valves covering a wide range of sizes and pressure classes.

General characteristics:

- 2 or 3 pieces side entry design with trunnion mounted or support plate configuration
- Design per API 6D or API 6A
- Full Bore and Reduced Bore design
- Flanged, Welding or Hub Ends
- Bi-directional sealing
- Fire-safe design

Model: EC
Size: 1/2" to 4"
Pressure Classes: ASME 150# to 2500#
API 6A 3000 to 15000
Temp. Range: -196°C to 400°C

Model: EB
Size: 4" to 68"
Pressure Classes: ASME 150# to 2500#
API 6A 3000 to 15000
Temp. Range: -196°C to 400°C

Perar Product Range

Trunnion Mounted Welded Body Ball Valves

The design of PERAR Welded Body Ball Valves minimizes the potential leak paths making these valves suitable for buried installations and in general for gas transportation.

General characteristics

- Design per API 6D or API 6A
- Full Bore and Reduced Bore design
- Flanged or Welding Ends
- Bi-directional sealing
- Fire-safe design

Model: WB
Size: 1/2" to 68"
Pressure Classes: ASME 150# to 2500#
Temperature Range: -196°C to 400°C

Trunnion Mounted Top-Entry Ball Valves

PERAR Trunnion Mounted Top-Entry Ball Valves add a full in-line maintenance capability to the advantages of a trunnion mounted construction.

General characteristics

- Design per API 6D or API 6A
- Full Bore and Reduced Bore design
- Flanged, Welding or Hub Ends
- Bi-directional sealing
- Fire-safe design

Model: TE
Size: 1/2" to 68"
Pressure Classes: ASME 150# to 2500#
API 6A 3000 to 15000
Temperature Range: -196°C to 400°C

Perar Design Features - Side Entry Ball Valves

2 or 3 pieces side entry design with trunnion mounted or support plate configuration for smooth and low torque operations

Drive train mechanism sized to safely withstand the maximum torque loads exerted by the different operating systems

Forged body and end adaptors

Different end types available (flanged, welded, hubs, etc.) in compliance with the main international codes

Hard-faced metal seated design is an option to the standard soft insert seat-to-ball sealing system

Perar Design Features - Side Entry Ball Valves

2 or 3 pieces side entry design with support plate configuration for smooth and low torque operations

Body welded construction for minimizing potential leak paths.

Forged body and end adaptors

Body shaped configuration for size and weight optimization

Perar Design Features - Top Entry Ball Valves

Top-entry design with upper bolted bonnet for full in-line maintainability welded construction for minimizing potential leak paths

Shaped cast body for size and weight optimization

Perar - Technical Features

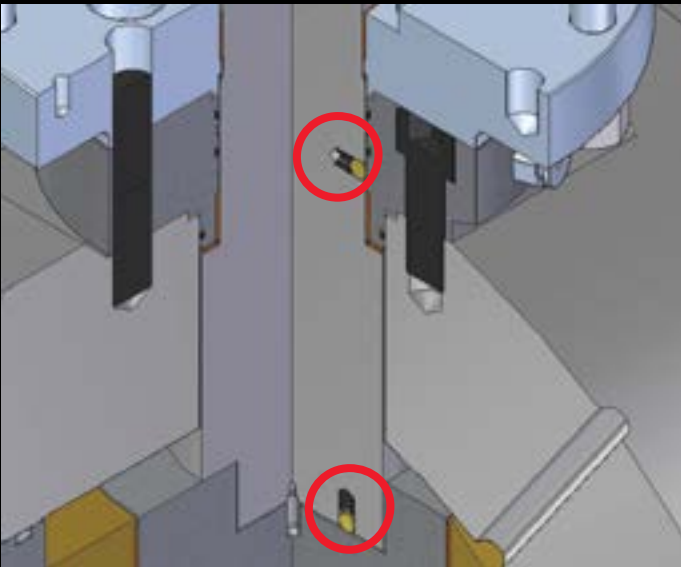

ANTI-BLOW OUT STEM DESIGN

The stem retention is obtained through a shouldered design which is kept in place by the top bolted cover, thus not relying on possible packing gland or operator components.

HEAVY DUTY BEARINGS

Heavy duty PTFE coated steel bearings are mounted on trunnions granting low friction with no need of periodic lubrication.

ANTISTATIC DEVICE

The electrical continuity between all metallic components of body and trim is granted by a spring loaded device.

PRESSURE BOUNDARY SEALING SYSTEM

A double barrier composed by an O-ring and a graphite gasket grant a perfect sealing together with fire safety at static joints between the pressure boundary parts making PERAR ball valves suitable for both topside and buried installations.

Different seal types (e.g. spring energised lip-seals) are available for special service conditions.

Perar - Technical Features

STEM SEALING SYSTEM

A triple barrier composed by two O-Rings and a graphite gasket is adopted as a standard feature for granting a perfect sealing and fire safety even after several valve operations.

The uppermost stem seal can be replaced with the valve in line after having depressurised the body cavity.

DOUBLE BLOCK AND BLEED DESIGN

Valve cavity can be bled through the vent/drain ports in either fully open or close positions for checking the seats integrity after installation.

SEAT FEATURES

Trunnion mounted ball valves are equipped with independent floating spring loaded seats in continuous contact with the ball such to grant an effective sealing even at low differential pressure or for slow pressure build-up.

Both self relieving and double piston effect seat versions are available.

The self relieving arrangement grants an automatic relief in case of possible cavity over-pressurization. In this case the pressure path around the upstream seat is such to generate a piston effect pushing the seat tightly against the ball surface.

The downstream seat, when the body cavity pressure is greater than the spring load, automatically relieves the cavity overpressure to the downstream conduit.

The double piston effect (DPE) arrangement is such to grant a thrust pushing the seats against the ball whichever is the differential pressure direction between the cavity and the conduits. In such a way, the downstream seat holds the pressure even when the upstream one fails for any reason. For this arrangement an automatic external relief device may be necessary.

A combination of a self relieving upstream seat and a downstream double piston effect one is available upon request.

This configuration provides a double barrier along the preferred flow direction granting at the same time an automatic cavity relieving.

Double Block & Bleed functionality is granted with any of the above described seat arrangement.

Perar - Technical Features

SOFT SEATED VALVES

Soft seated ball valves have a resilient insert firmly installed into a seat front groove for granting a perfect tightness under all conditions other than dirty or abrasive services.

METAL SEATED VALVES

PERAR trunnion mounted ball valves intended for dirty, sandy or high temperature services are designed with metal-to-metal sealing between the ball and the seat rings. These parts are hard-faced using different coatings, such as Tungsten or Chromium Carbides, depending on process type. An advanced design approach is applied using FEA technique for achieving tight shut off performances even with metal seating.

system can also be used for routine flushing of seat ring areas when needed.

STEM EXTENSION

PERAR ball valves are available with additional stem extension for underground installation. Stem extensions are made to customer requirements and can be completed upon request with vent, drain and sealant injection extended lines.

EXTENDED BONNET

Valves for low temperature / cryogenic services or for very high temperatures are equipped with extended bonnet for granting vapour space between the valve core and the stem sealing system.

This system prevents stem seals from damages at extreme temperatures and allows servicing also when valves are installed on insulated lines.

EMERGENCY SEALANT INJECTION

A sealant injection system is available upon request allowing the restoring of stem and/or seat tightness in case of damages of sealing components (either O-rings or seat inserts) and/or surfaces caused by possible presence of solid particles in the process fluid. The injection

PUPS

Valves with butt welded ends may be supplied complete with welded transition pieces and/or pups to avoid any damage of the valve non-metal internals during the welding activities on site.
